DESCRIPTORS: *Electric insulation, *Semiconducting film, *Ceramic coatings, Electrical properties, Electrical engineering.

This article presents a method of increasing the operational reliability of insulators in areas of heavy contamination by coating them with a semi-conducting glaze. Operational experiments established that the semi-conducting glaze distributed the voltage more evenly over the surface of the insulator. And that the insulator was heated by leakage currents giving it better (Engineering--Electrical, TT, v. 10, no. 12) (over)
